

PURGE EASILY REMOVES OIL AND OTHER CONTAMINANTS FROM AC AND REFRIGERATION SYSTEMS.

WHY PURGE?

Refrigeration and air conditioning systems will occasionally suffer failures which can result in contamination. The best way to deal with this problem is to replace the line set. That approach however is often impractical or too expensive. Purge, Vapco's superior flush system, offers a simple-to-use, powerful, industry-trusted and inexpensive alternative.

Ideal for R410A change outs, compressor burn outs, retro-fitting to new refrigerants and

component change, Purge is strong enough to rinse away particulate, sludge, carbon residues, acids, oils and water, yet safe enough to be non-toxic, and ozone safe. Purge features a ready to use, hands free pressurized canister which operates upright.

- ★ No Premature Boil Off
- ★ Leaves no residue
- ★ Non-Toxic
- ★ Non-Flammable
- ★ Industry standard for flushing refrigeration and air conditioning systems

Vapco Products, 401 Marshall Road, Valley Park, Mo 63088.

FEATURES

Purge contains a unique, environmentally-friendly, solvent engineered specifically for flushing contaminated refrigeration and air conditioning systems. It is used to flush contaminants such as debris, residual oil, acid, and moisture from refrigeration line sets. Its custom valve allows cylinder to be used in upright position.

Purge is a must for system clean ups, retrofits and system burn outs.
